# COVID-19: Keeping You Safe

What you can do to stay safe and healthy:

Pay attention to possible symptoms

- Fever, cough, shortness of breath, sore throat, or runny nose may be signs of COVID-19.
- Call your care team as soon as possible if you have any of these.

Come to your scheduled dialysis treatments

- Making all your treatments helps keep you healthy and out of the hospital.
- Even if you have COVID-19, your care team will help you treat safely while protecting others.

Wear a medical mask

- When you're not feeling well or test positive for COVID-19.
- During access-related care activities, such as CVC treatment or PD catheter connections.
- In other situations as determined by your care team.

Get vaccinated and boosted

- Vaccines are the best way to protect against serious illness and hospitalization from COVID-19.
- Your DaVita care team can help get you one.

How we're helping to keep you safe:

- DaVita follows strict guidelines from the CDC and Centers for Medicare and Medicaid (CMS) to help ensure all patients and care teams stay safe.
- Patients who test positive for COVID-19 may receive dialysis separately from other patients. This could mean they treat at a different time or space.
- DaVita care team members are experts in infection control. They are taking extra precautions to help keep you safe.

Reach out to your dialysis care team with any questions or concerns.
