

Keeping Your New Kidney Healthy

Welcome to DaVita's Post Transplant Health Program!

Staying healthy after a transplant takes ongoing care and support. We work with your transplant doctor to manage your care plan. Through this program, you'll have regular check-ups with a nurse practitioner at a DaVita Post Transplant clinic. We'll focus on what matters to your long-term health, including:

- Managing medications to help prevent rejection
- Getting lab work to monitor your kidney function
- Staying on track with medical appointments
- Living a healthy lifestyle
- Working with your doctors on care changes

These check-ups help your care team catch any health changes early. Attending these appointments is one of the most important things you can do to help protect your new kidney.

What happens next?

Someone on our team will reach out soon with more information. They can help schedule your first appointment.

We're excited to be part of your journey! We're committed to helping you get the best possible results from your transplant so you can live a happier, healthier life.
